Bilateral Meetings

- Thursday (10:00 pm - 12:30 pm)

Description

Knot Ltd is the official producer and distributor of an innovative and unique water monitoring device called WaterScope. WaterScope is able to detect microbiological organisms online and real time in the water. We are specialized to the microscopic organisms which have currently measured with a traditional method. WaterScope can detect them continuously and tell the exact number of the organisms per a liter water. We can send an early alert message to our customers as well. Our most important markets are: water utilities, waste water treatment plants, cooling towers, food industry, fish farms and laboratories. What we are looking for: Official distributor partners or new customers in the European region. What we offer: a well organised company with a professional background. A unique product range in this area with several possible applications.
